

Deadline – Saturday, October 17, 2020**Copy today's 01Demo in your assignment 7 folder**

You need to provide following functionalities:

1. Write stored procedures in SunbeamDB to perform insert and update operation
 - a. spInsert
 - b. spUpdate
2. Test above stored procedures & copy .sql files on git

git commit -m "Assignment no. 7.1 & 7.2 completed"

3. Call above stored procedures in Insert() and Update() methods of SQLServer class

git commit -m "Assignment no. 7.3 completed"

4. Don't create stored procedure for delete operation use parameterized query

For example:

```
string query = "delete from emp where No=@No";
cmd.CommandType=CommandType.Text
//create SQL parameter object and attach parameter to command
//    SqlParameter parameter1 = new SqlParameter("@No",
SqlDbType.Int, 50);
//    parameter1.Value = No;
//    cmd.Parameters.Add(parameter1);
//    cmd.ExecuteNonQuery
```

git commit -m "Assignment no. 7.4 completed"
